WOOD FRAME LOUNGE SEATING

"Living in a glass house makes you design pieces to look immaculate from every angle," says Craig Bassam, who designed the BassamFellows Wood Frame Lounge series for his own home. The outcome is a remarkably lightweight, yet sophisticated lounge range.

The lounges are infinitely adaptable pieces. This versatility is the result of the lounge's sublime, rigorously conceived form, which deconstructs the bulkiness of traditional lounge seating — an exposed structural wood frame and a system of thin, layered cushions.

The structural honesty achieves the appearance of a "floating" seat, angled for ergonomic balance, allowing the user to settle in rather than perch. Comfort is also of utmost importance. Within its minimal profile are seat and back cushions comprised of a variable density foam core surrounded by plush down and feather pillows that are hand sewn, tufted and welted. Lumbar and bolster cushions are removable and are comprised of down and feather fill.
